SALMA MOHAMED SALEM

Application Support Engineer
Al Wakra, Qatar | +974 7708 3573 | salma253salem@gmail.com | linkedin.com/in/salmamsalem

PROFESSIONAL SUMMARY

Application Support Engineer and full-stack developer with a Computer Science with Artificial Intelligence degree and hands-on experience sitting at the intersection of business and IT. Acts as lead developer and de facto business analyst across ERP implementation (SAP S/4HANA), internal automation platforms, and AI-assisted tooling, translating cross-departmental requirements into scalable software for Finance, HR, and Supply Chain functions across two group companies. Delivered applied AI projects including a hybrid rule-based/generative chatbot, an ML-based image registration and classification study for breast cancer tissue diagnostics, and a self-built data-loss-prevention classifier for sensitive financial data. Comfortable running discovery sessions, writing functional specifications, and coordinating between business owners, developers, and stakeholders in multicultural, multilingual environments.

CORE SKILLS

AI / Data & BI	Machine Learning fundamentals, NLP (rule-based + generative), Image Processing, Data Analysis & Pipelines, Power BI, Minitab, R models, Snowflake
Business Analysis	Requirements gathering, functional specifications, ERP (SAP S/4HANA) implementation support, process mapping, UAT coordination, change management
Engineering	Python, Django, Angular, TypeScript, JavaScript, PHP, C#, C, C++, Java, SQL, HTML/CSS
Security & Compliance	Endpoint DLP tooling, role-based access control (RBAC/RLS) design, SharePoint records governance, biometric API integration for attendance recording
Languages	Arabic (native), English (fluent), French (intermediate)
Soft Skills	Cross-functional stakeholder communication, project coordination, adaptability, multicultural collaboration, initiative

WORK EXPERIENCE

Application Support Engineer *Apr 2025 – Present*

Mazzraty (Al Mana Group) | Doha, Qatar

- Act as lead developer and technical architect for in-house Django platforms — including a Horilla-based HRMS, contract lifecycle management, and a petty cash/reimbursement portal — automating manual Finance, HR, and Supply Chain workflows across Mazzraty (poultry) and AQCDP (dairy).
- Built a comprehensive HR Portal using Django covering full leave request workflows, document expiry tracking, employee record management, and role-based access for HR Admin, Department Heads, and Managers — replacing entirely manual HR processes.
- Designed a five-tier role-based access and permissions system (Employee, Line Manager, GM, HR, Global Access) with badge-based identity resolution, supporting both companies from a shared codebase.
- Built and deployed an AI-powered e-commerce chatbot combining rule-based decision trees with a generative AI layer, extending query coverage across structured and open-ended customer interactions.
- Self-built a Windows data-loss-prevention (DLP) agent in Python, including a financial-data classification engine to flag sensitive data movement — an independent security automation initiative.
- Served as Assistant Lead on the SAP S/4HANA ERP implementation, leading structured discovery sessions across 18 operational departments in both companies and producing standardized, verified-only process documentation for the implementation partner.
- Built Power BI and Minitab dashboards for market share, sales performance, and management reporting, underpinned by data pipelines that clean and consolidate multi-branch sales data monthly.
- Established a SharePoint-based digital archiving system with defined taxonomy, permission tiers, and naming conventions for compliance-ready document retrieval.
- Leading the implementation of Snowflake at the company, building hands-on expertise with the platform while driving its adoption for centralized data warehousing and reporting.

- Integrated the company's biometric API into the HR website I personally developed, connecting existing biometric hardware to automate attendance recording — replacing manual clock-in/clock-out logging with real-time, tamper-resistant records and improving payroll accuracy across departments.
- Appointed by the CEO as the lead point of communication and technical lead for a new e-commerce project between Mazzraty and Ollen Group, serving as the sole channel for stakeholder communication between the two companies, managing tasks and timelines, and reviewing all data exchanged between teams.

Web Development Intern *Oct 2024 – Dec 2024*

Al Jazeera Media Network | Doha, Qatar

- Worked on building a Content Management System website under mentor supervision to strengthen technical web development skills using MVC (Model-View-Controller) design.
- Built the entire database architecture for a scalable CMS including metadata, comments, media, category with subcategories, and user information.
- Coded the full backend connecting the database to the frontend to work with all features — creating, editing, and deleting content efficiently, and retrieving categories in an efficient recursive way to support future additions.
- Developed the frontend to be scalable and flexible for any addition of content type, coding both the admin page with all lists and features and the public-facing frontend to show published articles in a user-friendly, maintainable template.
- Worked on updating the HR website for Al Jazeera using WordPress, focusing on CSS and layout of posts in the staging area.
- Built physical folders of the files on the Policy and Procedure website while updating the CSS, and documented all the plugins used across Al Jazeera's websites with speed and efficiency.

Computer Science Intern *Jun 2022 – Jul 2022*

QCRI | Doha, Qatar

- Strengthened Python skills by working on a project using Python and Pozyx for software and hardware components.
- Worked on debugging and configuring the website's frontend, ensuring smooth functionality, and helped clean up the backend code to optimize performance.
- Focused on establishing a seamless connection between the Python backend and the website's frontend.
- Developed and maintained comprehensive technical support documentation, providing valuable resources for ongoing maintenance and troubleshooting.
- Tested web development skills by adding features to the website to enhance its usability and accessibility.

EDUCATION

BSc (Hons) Computer Science with Artificial Intelligence *Sept 2022 – Jul 2024*

University of Nottingham | Semenyih, Malaysia

- Key modules: Artificial Intelligence Methods, Designing Intelligent Agents, Image Processing, Databases & Interfaces, Software Engineering, Computer Security, Algorithm Correctness & Efficiency.
- Final Year Project: Image Registration and Classification for Breast Cancer Tissue Staining (H&E and IHC) — applied machine learning and image processing to align staining types and classify cancer cells for a clinical diagnostics problem.
- Group Project: Unity-based game development within a full Software Engineering lifecycle.

Foundation in Science *Sept 2020 – Jul 2021*

University of Nottingham | Semenyih, Malaysia

High School Diploma — 99.5/100 *Sept 2017 – Jun 2020*

Mesaieed International School for Girls | Mesaieed, Qatar

PROFESSIONAL DEVELOPMENT & ACHIEVEMENTS

- IELTS: 7.5 overall.
- CS50: Introduction to Computer Science — Harvard University.
- 1st Place, Best Presentation Award — University of Nottingham Malaysia.
- International Mathematics Competition — Texas A&M University.
- Actively pursuing further coursework in machine learning operations, applied NLP, and multi-agent AI systems to deepen production-grade AI delivery skills.

ADDITIONAL EXPERIENCE

- Head of Volunteering Team, Otype (Jul 2018 – Sep 2019): organized events across various communities, including coordinating visits to the cancer section of Hamad Hospital, organizing events at special needs schools for individuals with conditions like autism and Down syndrome, and reaching out to working individuals on the streets with water and basic necessities. Handled the marketing side of events, promoting through both traditional media and social platforms, and documented all events to capture and share the team's impact; led a 41-person volunteer team; 1st place, Otype Volunteering Contest.
- Business Owner (Aug 2019 – Sep 2021): handled cash register operations and helped identify and solve workflow issues, processed documents and entered information into databases for better tracking, communicated with suppliers and logistics firms to ensure on-time delivery, fulfilled special orders and handled fragile deliveries safely, and communicated with shipping companies to track down missing shipments and keep customers updated on their orders.
